

Renault Kangoo Access

The new Renault Kangoo Access has new design and unprecedented adaptability. It is spacious, versatile and offers an easy solution to wheelchair travel. The best possible visibility for driver and passenger is achieved by the panoramic windscreen. It has increased storage space and a design that provides an exceptional level of comfort. This is enhanced by the Kangoo's responsive and precise chassis that reduces roll on winding roads and roundabouts.

The new Kangoo Access is easy to manoeuvre. It has a small turning circle between kerbs, making it one of the best in its class (10.7 m). All versions are equipped with the latest generation ABS and emergency brake assist.

The wheelchair accessible conversion offers a lowered floor with a wheelchair position and the options for rear seating. The wheelchair user's access is from the rear up a short lightweight counterbalanced ramp which has a shallow gradient of only 13 degrees. The wheelchair is then easily locked into place using a four-point wheelchair securing system.

The Kangoo Access offers a new level of comfort just for you and it is available in two specifications the Extreme and the Expression. There are several engine variants including a petrol automatic. The new Kangoo Access will solve most people's transport requirements and lifestyle needs. Contact us now to book your demonstration.
